

Special Features

- Single piece units – reduce overall footprint
- Robust, corrosion resistant, polyethylene construction, includes ribbing for extra strength
- Large centrifugal inlet chamber provides effective venting of compressed air energy, whilst multiple inlet ports and four inlet chamber positions simplify installation
- Large, easily cleaned primary settlement chamber for the accumulation and removal of dirt particles
- Large main tank increases settlement time and reduces oil carryover to carbon filter stage
- Large internal galleries reduce risk of an internal blockage and simplify maintenance
- Oil absorbing pre-filter(s) protect carbon stage from bulk contamination
- Large carbon stage for increased contact time, improving water quality and extending carbon life
- High specification carbon for improved service intervals
- Adjustable oil outlet funnel for the efficient removal of separated oil
- Sealed external oil container for easy oil disposal
- Sample tap removes need to disconnect outlet piping when obtaining a test sample

Accessories

- Additional oil containers for simple maintenance
- Flow splitter provides equal distribution of condensate on multiple oil/water separator installations
- Condensate manifold - multi ported device for connection to drain ports

There are many factors which play a part in the selection of a static oil/water separator, with ambient conditions of the installation and oil type being the most important. Capacities shown in this literature assume installation in two of the worlds major climatic conditions. Should the oil/water separator be installed in conditions other than those shown, please contact your local domnick hunter outlet or approved distributor/agent for correct sizing.

Climate Condition 1

System Conditions		Ambient Temperature at Compressor Inlet: 25°C (77°F)		Refrigeration Dryer Dewpoint If Fitted: 2°C (35°F)		System Pressure: 7 bar g (102psi g)	
Relative Humidity: 65%		Compressor Discharge Temperature: 35°C (95°F)		Min. System Temp. Without Refrigeration Dryer: 30°C (86°F)

For systems using 1 or 2 stage piston/reciprocating compressors multiply compressor flow by 1.4 and select a separator from screw compressor flow rates shown, ensuring due consideration is given to oil type.
For 3 or 4 stage piston/reciprocating compressors, please contact Parker domnick hunter.
